## INTRODUCTION

If the social software on the market is divided into two categories: The first category is the social platform for the wide area: Social intentions with acquaintances, such as Facebook, WeChat; weak society with strangers, such as Mo Mo and micro Bo. The second is a vertical social platform: such as the interest of social, Douban, Zhiwei on the basis of strangers, innovation, SnapChat, Secret; Social, Blued, Lara Garden, etc. Wait. The changes in the two major factors of people and technologies have directly contributed to changes in social products.

# Cryptos Boy

Social, why has become a new entrepreneurial dream?

Today, almost everyone spends a lot of time on mobile social.

According to statistics, there are currently 3 billion people in the world using social networking software, accounting for about 40% of the global population. The average person spends 2 hours a day using social software, which is equivalent to 1/12 of a day.

Some time ago, the topic #added new friends, chatted a few sentences and no whereabouts# was on the hot search, with 150 million views and 12,000 discussions.

Advances in communication and technology have had a profound impact on social interaction, but widespread Internet socialization has caused troubles to the privacy and families of many people.

Encrypted social networking based on web 3.0 has become a rigid need. This is what Cryptos Boy has brought into the social media world.

# Cryptos Boy

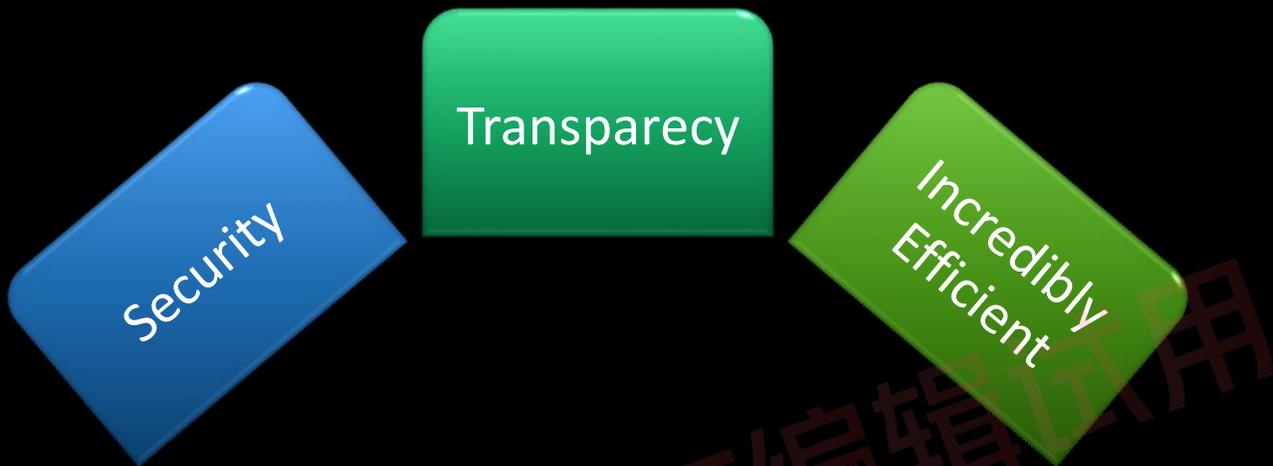

The bottom line is that social media is a powerful communication tool that can be used to achieve a variety of business objectives. As social media continues to evolve, businesses need to stay ahead of the curve and adapt their strategies accordingly.

In addition to this, Cryptos Boy depends on another evolving feature, decentralized web 3.0. The internet as we know it today is largely based on centralization. This means that a few key players control the flow of information and power. However, this is changing with the rise of blockchain technology. Blockchain is a decentralized platform that allows for peer-to-peer interactions without the need for a central authority. This new model of the internet, often

# Cryptos Boy

called web 3.0, has the potential to revolutionize the way we interact with the online world.

One of the most important aspects of blockchain is its security. Because it is decentralized, there is no single point of failure. This makes it incredibly difficult for hackers to penetrate. Additionally, all data on the blockchain is, so it is much more difficult to tamper with. This increased security is a major selling point for web 3.0.

Another advantage of blockchain is its transparency. All transactions are public and can be viewed by anyone on the network. This means that there is no room for fraud or corruption. Additionally, it makes it easier to track where money is being spent and how it is being used.

Finally, blockchain is incredibly efficient. Because there is no need for a central authority, users can process transactions much faster. This could potentially save businesses and organizations a lot of time and money.

# Cryptos Boy

Overall, blockchain has the potential to change the way we interact with the internet. It is more secure, transparent, and efficient than the current system. Web 3.0 can revolutionize the way we use the internet and could potentially have a massive impact on the world economy.

## WHAT IS Cryptos Boy?

Cryptos Boy is a web 3.0 decentralized platform where people can create and join the decentralized communities and interact with 100% real people worldwide. It is the next-generation social media platform built on the blockchain that provides a trusted and open environment to its users. The platform profoundly respects the freedom of expression and ensures that only genuine information and content is shared.

In the management of the circle of friends, the information we publish and forward is revealing our occupation, age, taste, who you block, who you follow, who you like, who you leave a message for, and how many comments and likes you can get. Reflect what kind of circle you are in in real life.

# Cryptos Boy

The current internet infrastructure is based on a centralized system, in which a few powerful entities handle all the data and control. This setup has various drawbacks, such as vulnerability to cyber-attacks, censorship, and data monopolization.

Web 3.0 is a decentralized platform that seeks to address these issues. It uses blockchain technology and peer-to-peer networking to create a more open, democratic internet.

So far, Web 3.0 has been mostly used for cryptocurrencies and other financial applications. However, its potential goes far beyond that. Web 3.0 could power a new generation of more secure, censorship-resistant, and equitable applications with its decentralized infrastructure.

# Cryptos Boy

As Web 3.0 develops, it has the potential to create a more open and democratic internet for everyone. Cryptos Boy is one example of a decentralized social media platform that is powered by Web 3.0. It allows users to control their own data and provides a more secure and private way to share information.

With Cryptos Boy, users can ensure that their data is safe from accessing or controlling by centralized entities. Cryptos Boy is an explicit example of how Web 3.0 can be used to create new applications that are more secure, private, and censor resistant, as Web 3.0 continues to evolve. With the passage of time, we can expect to see even more innovative Web 3.0 applications that will change the way we use the internet.

It offers highly innovative and distinctive features for social networks. The most exciting thing is it is free to use and easy to set up.

## **BENEFITS OF Cryptos Boy OVER WEB 2.0 SOCIAL MEDIA**

Humans have come a long way since the early days of the internet. We've gone from a handful of simple websites to a complex web of interconnected sites, services, and devices. The next phase of the internet, known as web 3.0, promises to be even more transformative.

Whereas the early internet was focused on providing information and connecting people, web 3.0 is all about using data to create new experiences

# Cryptos Boy

and applications. With web 3.0, we can finally start to harness the true power of the internet.

There are many exciting potential applications of web 3.0 technology. For example, smart contracts could revolutionize how we do business by eliminating the need for third-party intermediaries such as banks or lawyers.

Another key feature of web 3.0 is its decentralized architecture. This means that there is no central authority governing the internet. Instead, it is powered by a network of computers known as nodes. This makes it more resilient and secure than traditional systems.

# Cryptos Boy

Web 3.0 is still in its early stages, but it holds tremendous potential for the future. We can reimagine the internet and create new, previously unimaginable experiences with this technology. We are entering a new era of the internet, and it will be amazing! A new generation of the internet and web 3.0 is leading the way.

Cryptos Boy is more than just a book. Web 2.0 social media, though ruling the digital world, has many shortcomings. Cryptos Boy brought Web 3.0 to address all those issues providing power back to the users.

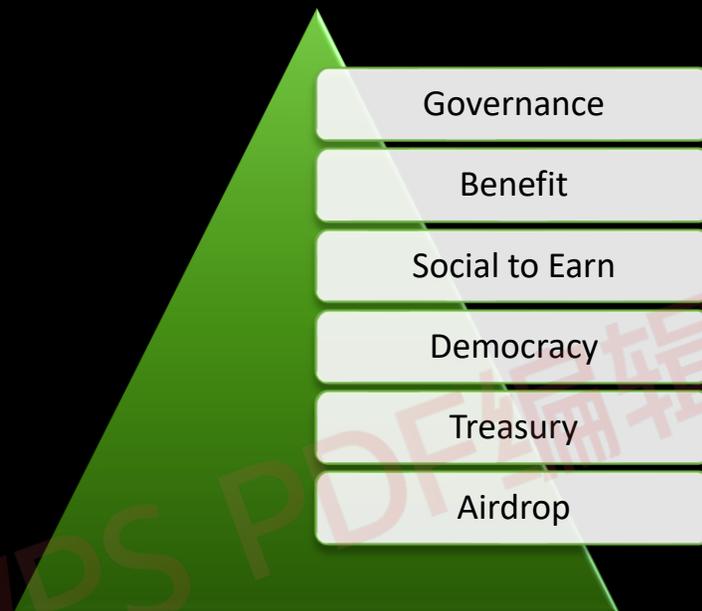

Let's have a quick look at how Cryptos Boy, a web 3.0 decentralized social media platform, is better than a web 2.0 centralized platform.

# Cryptos Boy

## WHY Cryptos Boy?

Cryptos Boy is a web 3.0 decentralized social media platform that is built on blockchain technology. It offers several features that make it different from other social media platforms.

Some of the notable features of Cryptos Boy include:

### Governance

CB puts the future of the Cryptos Boy platform directly into the hands of each individual user, allowing users to curate the platform's content control parameters and future features.

### Benefit

All platform revenue is distributed back to each individual CB holder instantly, depending on the amount of CB held: more CB, more benefits.

# Cryptos Boy

## Social to Earn

CB allows users to earn their fair share of the beneficial output of their efforts.

Daily visit, like, comment, share, or create a post, liked, or commented by others

- all positive actions will be automatically rewarded with CB.

## Democracy

Vote with CB, elect custodians you trust.

## Treasury

A community-owned asset controlled by elected custodians' multi-signature smart contract.

## Airdrop

Free airdrop for all users. Log in with your web2.0 accounts and get instant \$FACE airdrop.

Users can earn for their efforts in the form of CB tokens. All positive action such as daily visits, likes, comments, shares, posts, etc., are automatically rewarded. The more CB users hold, the more benefits they can enjoy. most of CB is used for user rewards, airdrop, community tasks, and providing liquidity for trading. Users can also vote and elect custodians with CB holdings. The more data users will contribute, the more CB reward they can earn.

# Cryptos Boy

## Development

Developing and maintaining a large social platform for millions of users is costly.

47.62% of CB is used to provide infrastructure, server, and engineer costs.

## ROADMAP

### Phase 1

- Public launch
- Twitter Marketing
- Telegram Marketing
- Website launch

### Phase 2

- 2000 telegram members
- Bigger marketing launch
- Coingecko and CMC
- 3000 holders

### Phase 3

- 10,000 telegram members
- Partnership with big influencers
- Audit submissions
- 5000 holders

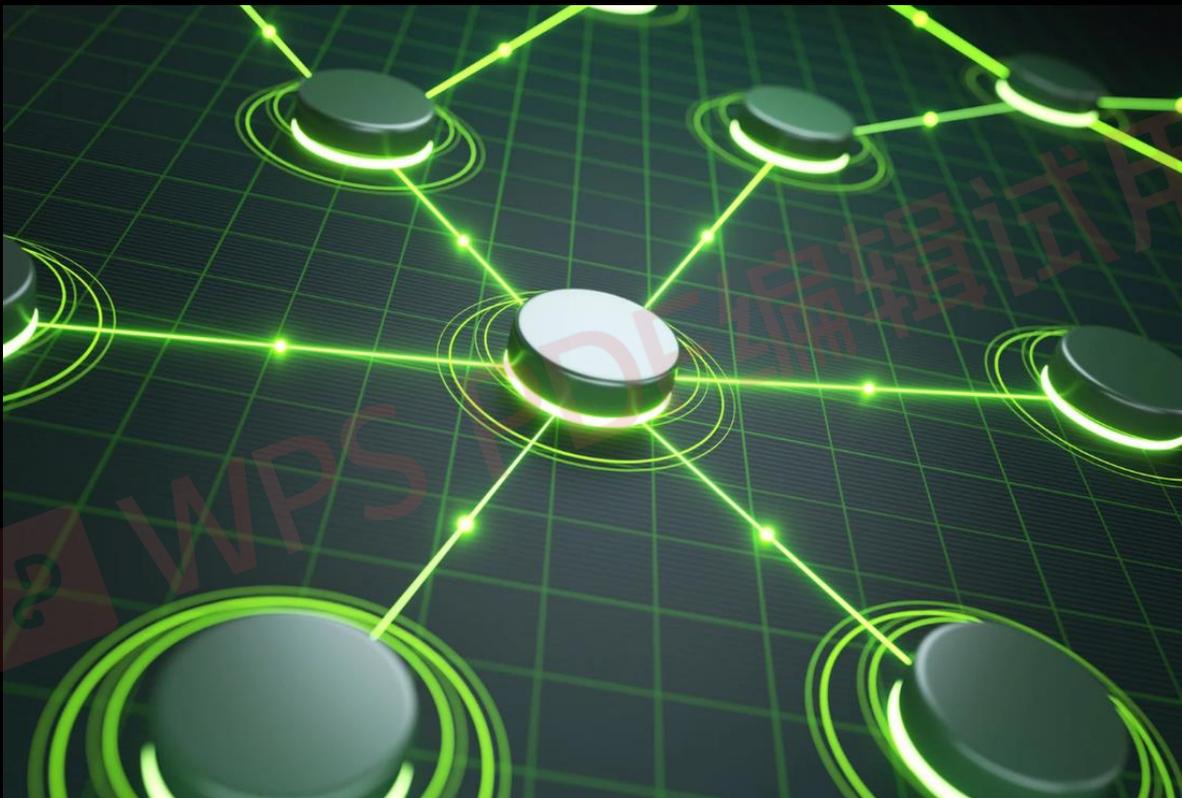

### Phase 4

- Big marketing push
- Strategic partnerships
- Audit completions
- 20,000 holders

# Cryptos Boy

## TEAM BEHIND Cryptos Boy

The world's leading decentralized team has created Cryptos Boy, a new way of managing and interacting with groups that are based on the blockchain. Cryptos Boy allows team members to be rewarded for their contributions and provides secure and transparent progress tracking.

The team behind Cryptos Boy consists of experts in the fields of blockchain technology, artificial intelligence, and online security. They are a team of industry experts and business executives from IBM, Google, Apple, Huawei, Facebook, and Tencent, all enthusiastic about creating a better way for people to interact online. They are dedicated to building the future of decentralized communities in the Web 3.0 era.

# Cryptos Boy

## COMMUNITY

The decentralized community appreciates Cryptos Boy on a large scale. Cryptos Boy only debuted on various social media platforms recently. But the online communities have shown enormous passion for the project by welcoming it on a large scale. Within less than a month, the followers of Cryptos Boy have surpassed several thousand. Cryptos Boy also hosted its first official AMA session to help people clearly

# Cryptos Boy

## THE NEXT GENERATION SOCIAL MEDIA EXPERIENCE

It is the right time to switch from Web2.0 to Cryptos BoyWeb3.0 social media and say goodbye to all hassle. Because now, not only will you get the experience of an enhanced social media platform with several unique features, but you can also earn tokens through an airdrop campaign.

A centralized system has played its part; the future is decentralization, and Cryptos Boy is a blockchain-based decentralized SocialFi platform.

Join Cryptos Boy today to explore more about it. And you are definitely going to love it!
